Integrated Quality & Environment Policy

Our top management shall establish, implement and maintain an Integrated Quality and Environmental policy which will be released through statements and procedures referenced throughout our Integrated Management System (IMS).

The policy shall be appropriate to the purpose and context of the organisation and supports its strategic direction. In addition, it will provide a framework for setting both quality and environmental objectives and include a commitment to satisfy applicable requirements.

JT5 Services recognise that the nature and scale of our business has a potential to impact detrimentally on the environment, particularly where we use cleaning materials and in handling waste disposal.

We are committed to continuous improvement of the quality and environmental management systems, to enhance the environment performance within the organisation and to the prevention of pollution. The commitment to fulfil our compliance obligations is of paramount importance.

This policy shall be published, communicated, understood and applied within the organisation. It will be maintained as documented information and be available to our staff, sub-contractors and other interested parties.

A full review of this Integrated Policy will be completed annually within the Management Review Meetings.
